

# How we weight the Quality of Life V 2017/18 Survey results

Despite the large size of the survey sample, it always differs slightly from Gauteng's population in terms of race and gender. In addition, ward populations differ and we use a fixed sample size in each ward. We use a process called weighting to ensure that the survey results reflect Gauteng's population as accurately as possible. Our weights use gender, race, and ward size.

## Gender

## Race

## Ward
